

The schema in playground schema-first approach

The schema in playground schema-first approach

commit id

c6ec7d0 (HEAD -> TP04, IP2/TP04) code-first working
e199912 schema-first working

short Note

I prefer Code-first because it integrates well with TypeScript and NestJS decorators. It reduces duplicate code and is easier to maintain.

Schema-first is useful for large teams where the GraphQL schema is designed first.
